The Swedish Foundry Association is the Swedish casting industry's trade organization. A close cooperation is maintained with Swerea SWECAST Ltd, The Swedish Institute of Casting Technology.

Over 50 people are employed by the Institute, in areas such as research and development, training, consulting and promoting collective industry interests. The Association operates in close co-operation with member companies, which in many cases are parts of leading business groups. Our mission is to be a dynamic centre of competence, actively supporting an expanding foundry industry.

The Association counts more than 100 foundries amongst its members, which together produce more than 99 % of the cast components manufactured in Sweden. In addition, more than 50 foundry suppliers and 20 castings buyers are members. The Association has considerable laboratory resources at its disposal for research, consulting and training, including a well-equipped foundry.

Collective industrial, trade and marketing activities

The Association represents Swedish foundry companies through its industrial and marketing activities. Our member service includes regular surveys of Swedish and international foundry developments. We continuously collect and summarise statistical data covering production, exports and imports, order stocks and work-force availability, and have in-depth knowledge of our markets, customers and suppliers.

Research and development, consulting and contracting

The Association conducts or co-ordinates practically all collective research and training in the foundry area in Sweden. In the majority of cases this is done in partnership with the foundry industry and its customers. The Association has an extensive network of partners nationally and internationally. Our research and development activities cover all foundry technologies, including for example:

- Manufacture of cast materials and components, including their properties
- Moulding and core materials
- Design of cast components
- High Pressure Die Casting and Gravity Die Casting
- Production engineering
- Quality control
- Foundry internal and external environment
- Fettling and other finishing operations
- Energy conservation technology
- Standardisation

The Association has a leading position in areas such as Production Simulation, Environment, Design and Material Technology. Our activities cover all aspects of foundry training, technology, and industry interests. As contract work is done in parallel with our research and development programmes we are always well informed of the latest technology and trends.

Training and education

The Association arranges a significant number of courses and conferences. We offer courses in metallography, mould and core materials, defect analysis, quality control, process technology, high pressure and gravity casting, etc. We also arrange internal courses for foundries and end-users, which are tailored to our clients' specific requirements.

Scandinavian Foundry School

The Association is responsible for operating the Scandinavian Foundry School, where foundry staff from Sweden, Denmark and Norway is trained.

Since 1994 the students have the possibility to accomplish an apprentice's examination work and receive a journeyman's certificate.
